

## Cleaning in the food industry

REYM is an industrial service provider. We support our customers in the field of industrial cleaning, transport and waste management, always acting from our mission 'Industrial Services our concern' and driven by our core values.

REYM is increasingly being used by clients in the food industry in the Netherlands to carry out cleaning activities. To record its experience and knowledge and to support clients in this process, REYM is ISO 22000 certified (food safety). This also makes REYM your partner for cleaning activities in the food industry.

### Food industry

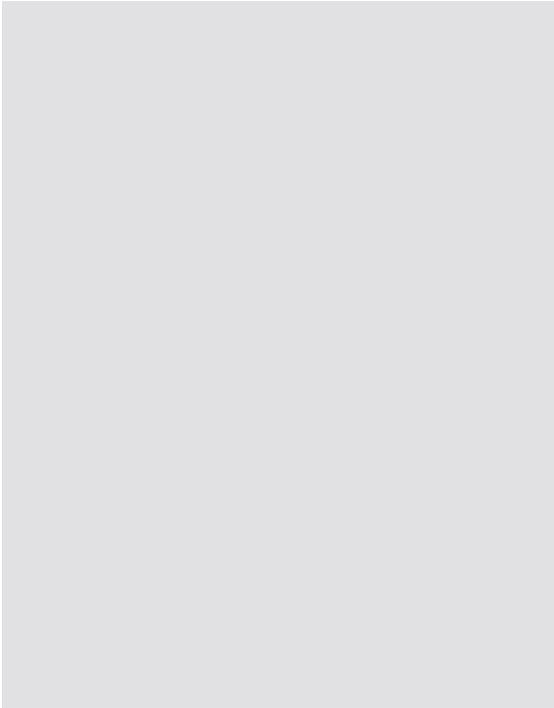

Hygiene and working safely with food are both essential in the food industry. This applies not only during the production process, but also during cleaning activities. REYM is frequently asked to carry out cleaning assignments in the food industry and, so as to define and clarify our expertise and knowledge in this area, we have decided to add these processes to the management system and to have that certified.

REYM is ISO 22000 certified and will therefore be the ideal partner to carry out cleaning operations in the food industry.

### Defining and preparing the work

Collaboration with the customer is of great importance to REYM. This means that a working plan will be drawn up and discussed with you, the customer, before the work begins. This working plan will establish the preparations for the work and will also set out the CCPs (Critical Control Points), together with their accompanying control measures.

REYM has at its disposal dedicated equipment and personnel trained for the food industry, who can service customers throughout the country. People and equipment are available to you 24 hours a day, seven days a week, to meet all your requirements in the area of food-safe cleaning.

### Examples of specific cleaning assignments within the food and animal feed industry

- Drains and gullies
- Boilers Ovens
- Machinery
- Filters, including sand filters
- Pipework
- Boiler scale pollution
- Cleaning, inspection and relining of sewers
