

Central Mud plant Emmen (CMP)

REYM is an industrial service provider. We support our customers in the field of industrial cleaning, transport and waste management, always acting from our mission 'Industrial Services our concern' and driven by our core values.

Re-use

At CMP REYM produces all conceivable types of drilling mud and production fluids for the oil and gas extraction industry. Clients can offer residual fluids to the CMP for storage and reuse after they have been drilled. This is a unique opportunity.

Storage

Our total storage capacity in silos and tanks is 5,000 m³. There is a separate section for the preparation and storage of oil flushes. For other rinses and liquids, there are different sizes of mixing bowls. We also have a large storage capacity for pallets of chemicals. Thanks to the high storage capacity, CMP can produce and deliver drill cuttings and production fluids to you directly.

All in one

REYM has a strategic network of branches with a wide range of services. As a result, in addition to producing, storing and recycling drilling mud, CMP can also take care of transport

in the Netherlands and Germany (with the exemption of weekend) for you.

Quality laboratory

An experienced engineer carries out permanent quality inspections in our laboratory and can give you advise about the production of new fluids.

The advantages of the CMP

- Cost savings through reuse
- Quality controls (in accordance with API)
- Logistical network
- Very short delivery time
- Always available

Integrated approach

The Central Mud Plant in Emmen is an important link in the integrated approach of REYM.

If you would like more information, please contact one of the REYM branches in your region.
